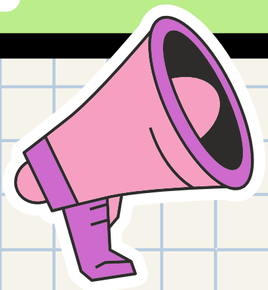
Tables in HTML



<table>, <tr> and <td>

```
<table>
 <tr>
    <td>History</td>
    <td>18</td>
    <td>N</td>
  </tr>
</table>
```

<thead>, <tbody> and <tfoot>

<thead>: The <thead> HTML element defines a set of rows defining the head of the columns of the table.

<tbody>: The <tbody> HTML element encapsulates a set of table rows (<tr> elements), indicating that they comprise the body of the table (<table>).

<tfoot>: The <tfoot> HTML element defines a set of rows summarizing the columns of the table.

<caption>, <colgroup> and <col>

<caption>: The <caption> HTML element specifies the caption (or title) of a table.

<colgroup>: The <colgroup> HTML element defines a group of columns within a table.

<col>: The <col> HTML element defines a column within a table and is used for defining common semantics on all common cells. It is generally found within a <colgroup> element.
