

CSS SELECTORS ✓

Types of Selectors

1. Simple Selectors

- a. Element Selector
- b. class Selector
- c. id Selector

2. Universal Selector : *

3. Grouping Selector

4. Nested Selector

The class & id Selectors

1. To select elements with a specific class, write a period (.) character, followed by the class name.
2. HTML elements can have more than one class.
3. A class cannot start with a number

1. To select an element with a specific id, write a hash (#) character, followed by the id of the element.
2. The id of an element is unique within a page, so the id selector is used to select one unique element!
3. An id cannot start with a number

Specificity Order

id > class > element

ICE

#first > .purple > p

There is also an **!important** rule, That is used to add more priority to the property than normal.

Note: Do not use it unless you absolutely have to.
