

Images in HTML

The Tag

```

```

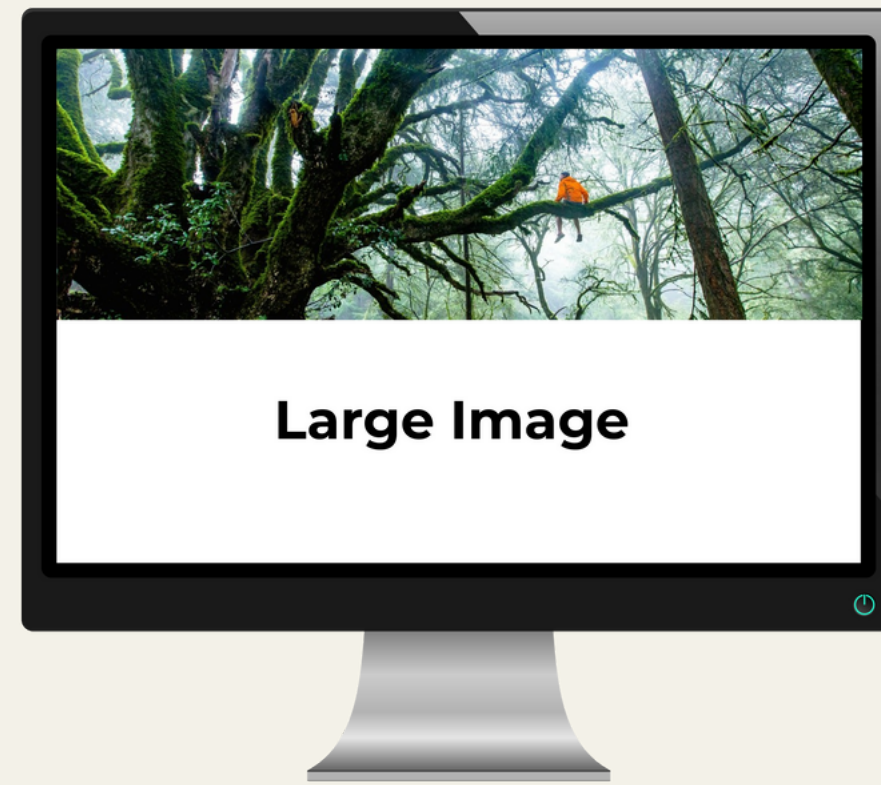

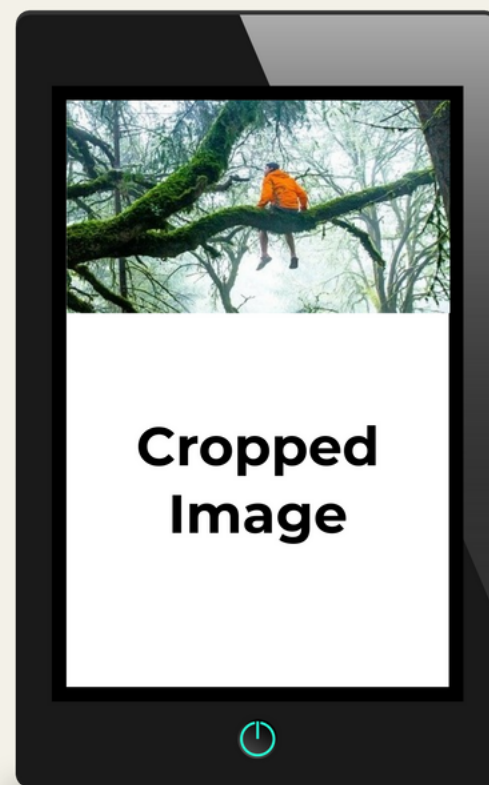

src: Specifies the path to the image

alt: Specifies an alternate text for an image

width and **height** specify the width and height of an image respectively

Responsive Images

We should use Responsive images for these Two scenarios:

1. Fetch Lower Quality image on low resolution screens to load images faster.
2. To tackle the Art Direction Problem

srcset and sizes

```
<img srcset="img_gir_lowq.jpg 1x,  
img_girl_highq.jpg 2x" alt="Girl in a Jacket">
```

```
<img srcset="img_girl_small.jpg 400w,  
img_girl_large.jpg 600w" alt="Girl in a Jacket"  
sizes="sizes="(max-width: 400px) 400px,  
(max-width: 600px) 600px,  
800px">
```

srcset: One or more strings separated by commas, indicating possible image sources for the user agent to use

sizes: One or more strings separated by commas, indicating a set of source sizes.
